

## Partnerships Human Subjects Training Requirements

**Human subjects training** is required for all investigators, faculty, staff, and students conducting research with human subjects at the University of Arizona. The IRB will not approve protocols unless all research team members have completed current and appropriate human subjects training.

There are two Collaborative Institutional Training Initiative (CITI) program courses to choose from, depending on the type of research:

HSPP requires all study team members involved in **FDA-regulated research** or **accessing medical records** to complete the Biomedical Research Investigators Basic Course.

For all other research, HSPP will accept either the Biomedical or the Social Behavioral human subjects research training course.

- Both training courses include the **Native American Research Module**, which is required training for all University of Arizona researchers.
- CITI training is valid for four (4) years, after which refresher training must be completed.
- Remember to keep a copy of your training certificate for your records.

## How do I complete human subjects training?

Training courses are available through **<u>UA EDGE Learning</u>** or directly from the **<u>CITI Program</u> <u>Website</u>**.

For more information about HSPP training requirements, visit the HSPP Training webpage.
