

## Research Involving Prisoners

### ***When Does Human Research Involve Prisoners?***

A study is considered to include prisoners when the intent of the research is to conduct research with prisoners, and the researcher intends to interact or intervene with the prisoner or to obtain the identifiable information about the prisoner.

A study may not initially intend to involve prisoners, but a subject may become a prisoner during the course of a research study. The investigator must promptly notify the IRB and all research interactions and interventions with, and obtaining identifiable private information about, the now-incarcerated prisoner-subject must stop. If it is not in the best interest of the prisoner to stop research activities, the investigator must request a special exception due to subject safety until the IRB can determine that the regulatory requirement for research with prisoners are met.

If the investigator wishes to have the prisoner subject continue to participate in the research, the IRB must promptly review the proposal to determine if the requirement for involvement of prisoners has been met.

### ***Requirements for Inclusion of Prisoners in Human Research***

Investigators must provide protocol specific justification to the IRB, so that the IRB may make a determination that the enrollment of prisoners in the research is justified.

Research involving prisoners may not be deemed exempt. Research may be deemed expedite if the research involves no greater than minimal risk for the prison population. Modifications to research may be reviewed per the guidance 'Amending Approved Research' for minor changes, or changes involving significant changes. Changes involving significant changes, and continuing review, must use the same procedures for initial review including review by the prisoner representative.

For research that does not involve interactions with prisoners (e.g., existing data, records reviews), the research may be reviewed via the expedite procedure. Review by the prisoner representative is not required unless so designated by the IRB Chair.

To include prisoners in human research, include the Appendix for Vulnerable Populations with your IRB materials.

### ***Definitions*** ([45 CFR §46.202](#))

*Prisoner* means any individual involuntarily confined or detained in a penal institution. The term is intended to encompass individuals sentenced to such an institution under a criminal or civil statute, individuals detained in other facilities by virtue of statutes or commitment procedures which provide alternatives to criminal prosecution or incarceration in a penal institution, and individuals detained pending arraignment, trial, or sentencing. For prisoners, "minimal risk" means the probability and magnitude of physical or psychological harm that is normally encountered in the daily lives, or in the routine medical, dental, or psychological examination of healthy persons.

## Research Involving Prisoners

### ***Categories of Research Involving Prisoners***

1. Study of the possible causes, effects, and processes of incarceration, and of criminal behavior, provided that the study presents no more than minimal risk and no more than inconvenience to the subjects;
  - a. For Epidemiological studies the project must: describe the prevalence or incidence of a disease by identifying all cases; study potential risk factors associations for the disease, and prisoners are not a particular focus of the research.
2. Study of prisons as institutional structures or of prisoners as incarcerated persons, provided that the study presents no more than minimal risk and no more than inconvenience to the subjects;
3. Research on conditions particularly affecting prisoners as a class (for example, vaccine trials and other research on hepatitis which is much more prevalent in prisons than elsewhere; and research on social and psychological problems such as alcoholism, drug addiction, and sexual assaults) provided that the study may proceed only after the Secretary has consulted with appropriate experts including experts in penology, medicine, and ethics, and published notice, in the FEDERAL REGISTER, of his intent to approve such research; or
4. Research on practices, both innovative and accepted, which have the intent and reasonable probability of improving the health or well-being of the subject. In cases in which those studies require the assignment of prisoners in a manner consistent with protocols approved by the IRB to control groups which may not benefit from the research, the study may proceed only after the Secretary has consulted with appropriate experts, including experts in penology, medicine, and ethics, and published notice, in the FEDERAL REGISTER, of the intent to approve such research.

### ***Expansion of Research Involving Prisoners***

The University of Arizona has adopted flexible procedures for projects that are not federally funded, supported, or otherwise subject to the federal rules. Projects that meet the requirements of the Flexible Policy may be eligible for increased research activities involving prisoners.

- A. Unfunded or non-federally funded research is not required to get approval from the secretary at HHS.
- B. Research using data, samples or materials that involve prisoners or that may involve prisoners may qualify for review under the flexible procedures.
- C. Individuals incarcerated during participation in research may continue participation in non-federally funded projects without an IRB re-review involving the prisoner representative if the intent of the study is not to study incarcerated individuals. The research procedures must not continue in the prison facility (e.g. a subject is enrolled in the emergency room, and all study procedures will be completed prior to the prisoner leaving the facility).
- D. Modifications to prisoner research do not require re-review by the prisoner representative unless the changes are significantly altering the risk of the prisoner population as determined by the IRB Chair.

## Research Involving Prisoners

- E. Renewal of prisoner research may follow the same procedure for initial review without the responsibility of the prisoner representative, unless the research identifies increased risk to the prisoner population as determined by the IRB Chair.
- F. The UA HSPP will not consider persons in transitional custody whose liberty is restricted such as half-way houses, electronic monitoring, probation, or house arrest, to meet the federal definition of prisoner. For those individuals, the criteria at 45 CFR 46.111 offer sufficient protection for their level of vulnerability.
- G. Data analysis of information collected from court records may be deemed exempt.

For those individuals, the criteria at 45 CFR 46.111 offer sufficient protection for their level of vulnerability.

### ***IRB Requirements for Approval of Research with Prisoners***

1. The research under review represents one of the categories of research permissible under [§46.306\(a\)\(2\)](#);
2. Any possible advantages accruing to the prisoner through his or her participation in the research, when compared to the general living conditions, medical care, quality of food, amenities and opportunity for earnings in the prison, are not of such a magnitude that his or her ability to weigh the risks of the research against the value of such advantages in the limited choice environment of the prison is impaired;
3. The risks involved in the research are commensurate with risks that would be accepted by non-prisoner volunteers;
4. Procedures for the selection of subjects within the prison are fair to all prisoners and immune from arbitrary intervention by prison authorities or prisoners. Unless the principal investigator provides to the Board justification in writing for following some other procedures, control subjects must be selected randomly from the group of available prisoners who meet the characteristics needed for that particular research project;
5. The information is presented in language which is understandable to the subject population;
6. Adequate assurance exists that parole boards will not take into account a prisoner's participation in the research in making decisions regarding parole, and each prisoner is clearly informed in advance that participation in the research will have no effect on his or her parole; **and**
7. Where the Board finds there may be a need for follow-up examination or care of participants after the end of their participation, adequate provision has been made for such examination or care, taking into account the varying lengths of individual prisoners' sentences, and for informing participants of this fact.

The IRB Director will certify to OHRP the duties of the IRB have been fulfilled for DHHS-funded or supported research.
